Glimpses of Niagara Falls.

AMONG the great natural wonders of the world, the Falls of Niagara occupy the first rank. Since they were first discovered by the French voyageurs of early Indian times they have attracted visitors by the million, and are the first feature of interest sought by Europeans travelling on the American continent. The American Fall is 159 ft. high and 1,000 ft. wide. The Horseshoe Fall is 165 ft. high and 2,400 ft. wide. This Fall is on the Canadian side of the Niagara River. About ten times as much water pours over the brink of the Horseshoe Fall as that which passes over the American Fall. A favorite point of vantage from which the Falls are seen is the view from Prospect Point on the American side. This view is to be had from Prospect Park, the United States Public Reservation. The most beautiful view, however, is that from Victoria Park, the Canadian Reservation. From here the magnificent sweep of the Horseshoe Fall is seen to best advantage, with the spray leaping from below almost to the brink of the Fall and sparkling in the sunlight in myriad kaleidoscopic colors. From Goat Island in the centre of the Fall the view of the American and Canadian Falls is also magnificent. This island is laid out as a park and is traversed by many beautiful driveways. Another favorite view is that from the little steamer "Maid of the Mist," at the base of the tremendous mass of waters that falls from the heights above. The tremendous force of Niagara has worn out a gorge 200 ft. deep, extending to Lewiston. The Whirlpool Rapids are some distance down the Gorge where the walls narrow to a width of 300 ft. Here the waters have a speed of 40 miles an hour, and are piled together in the utmost confusion. The base of the Gorge is traversed by a trolley line, the Niagara Gorge and Railway Co., and affords a delightful way of viewing the Rapids and the Whirlpool at close range. On the Canadian side of the river the International Belt Line have trolley cars running from the Falls to Queenston. On the American side, about 40,000 horse power has been developed and still further power is to be developed by the Niagara Power Co. On the Canadian side, two or three companies are installing plants to develop power for distribution throughout Ontario.
